High Volume Outbound Mail Implementation

OVERVIEW:

For many businesses, such as financial services and Internet commerce, email has become the standard way to communicate with customers, partners and suppliers. This communication uses email for timely alerts, financial statements, order information, and many other business purposes. As the volume of outbound email increases, the need for a highly scalable, flexible and secure outbound mail system is critical. Sendmail's High Volume Outbound Mail Implementation leverages the experience of over 1,000 enterprise implementations and delivers the optimal solution for reliably sending high volume, time sensitive, and mission critical mail.

DESCRIPTION:

Implementation and testing of the Sendmail High Volume Mail solution including primary, secondary, fallback and bouncehandling servers. This offering implements Sendmail "best practices" for outbound mail.

SYMPTOM(S):

Businesses with high volume email requirements and who generate high volumes of email from other applications.

MILESTONE(S):

Phased project—implementation and configuration of software; initial performance testing; tuning; re-test; verification of results.

DELIVERABLES:

Installed and tested system for outbound mail.

BENEFIT:

Sendmail Professional Services will implement the High Volume Outbound Mail solution to deliver email campaigns and notifications on a timely basis—with minimal impact to the existing email environment.
